linkedin.com/in/srushti-warad-713395349 | github.com/srushtiw13020 | <https://srushtiw13020.github.io/Portfolio/>

PROFILE

Full-stack developer with hands-on internship experience building responsive web applications using React.js, Node.js, MongoDB, and REST APIs, plus applied machine learning and computer vision experience from a data science internship. Comfortable across the stack, from Figma wireframes through backend authentication and cloud deployment on AWS. Seeking an entry-level software development role to build scalable, real-world applications and continue growing technical depth.

EDUCATION

Master of Computer Applications (MCA)

2024 - 2026

Gogte Institute of Technology, Belagavi, India

Bachelor of Computer Applications (BCA)

2021 - 2024

BLDEA's A.S. Patil College of Commerce, Vijayapura, India | CGPA: 8.12

PROFESSIONAL EXPERIENCE

Full Stack Development Intern

Feb 2026 - May 2026

VTU's VRIF, Belagavi, India

- Developed responsive web applications using HTML, CSS, JavaScript, React.js, Node.js, and MongoDB
- Designed user interfaces and wireframes in Figma, following UI/UX best practices
- Built and integrated frontend and backend modules with REST APIs, implementing authentication and dashboard functionality
- Contributed to the AI-Based Disease Outbreak Warning System (AIDOWS), focusing on real-time data processing and predictive analytics
- Used Git and GitHub for version control and team collaboration
- Deployed applications to cloud platforms and performed testing and debugging

Data Science Intern

Apr 2024 - Jun 2024

Shriram Solutions, Vijayapura, India

- Applied Python, machine learning, and computer vision techniques, including data preprocessing, to real-world problem solving
- Built a Leaf Disease Prediction System to detect plant diseases from leaf images for early crop disease identification
- Performed image preprocessing - segmentation, feature extraction, and image enhancement - to improve model performance
- Used Python, OpenCV, TensorFlow/PyTorch, NumPy, Pandas, and Scikit-learn for data analysis, model development, and evaluation

PROJECTS

AI-Based Disease Outbreak Warning System (AIDOWS) — React.js, Node.js, MongoDB, REST APIs, WHO Data API

Full-stack disease surveillance and healthcare analytics platform supporting real-time outbreak detection, vaccine tracking, and clinical decision support. Integrated WHO live data feeds, role-based multi-user authentication, doctor-patient consultation workflows, and country-level geo-spatial analysis to help monitor disease spread.

Nexus AI Dashboard — React.js, Node.js, REST APIs

Scalable full-stack web application with an interactive analytics dashboard, secure multi-device authentication, social login integration, role-based access control, and a responsive, animated UI.

Leaf Disease Prediction System — *Python, TensorFlow/PyTorch, OpenCV, CNN, SVM*

Plant disease detection system trained on leaf image datasets to identify early signs of crop disease and support timely preventive action by farmers. Applied image segmentation and feature extraction, then trained CNN and SVM models for disease classification.

Campus Complaint Management System — *Python (Flask), SQLite, HTML, CSS, AWS*

College complaint management platform with role-based authentication for students and administrators, including secure registration and login. Deployed on AWS Free Tier.

SKILLS

Programming Languages: Python (Intermediate), Java (Basic), C++ (Basic), JavaScript

Web & Frameworks: HTML, CSS, React.js, Node.js

Databases: MongoDB, SQLite, SQL

Tools & Platforms: Git, GitHub, Jira, Figma

Cloud & DevOps: AWS (EC2, S3), Docker, Jenkins

Data Science & ML: TensorFlow, PyTorch, OpenCV, NumPy, Pandas, Scikit-learn

Soft Skills: Problem-Solving, Team Collaboration, Adaptability, Communication, Presentation

Languages: English (C1), Hindi (C1), Kannada (C1)
